APPLICATION FEATURES OF INCLUSIVE DEVELOPMENT CONCEPT IN RESOURCE REGIONS

The paper explores a possibility of inclusive development in resource regions. We evaluate the degree of inclusiveness of Russian regions' socio-economic development for the period between 2008 and 2014. The article defines

a set of indicators that reflect the state of the system under study and its components with regards to development inclusiveness. It substantiates the calculations algorithm and resultant index principles. Our findings show a mixed picture whose analysis helps to identify the factors specific for resource regions and affecting the degree of inclusiveness of economic development. The results aimed at both improving the methodology for the research of regional socio-economic issues and obtaining a practical impact expressed as a contribution to management practices.

Keywords: region; resource structure of the economy; inclusive growth; sustainable development; indicators of inclusive development; social problems of development

*The publication is prepared within the framework of the project
